Argument:5 Value:of
Argument:6 Value:arguments
D:\examples>_

```

Lecture No.	3
Suggestion type	Adding New Slide
Artifact	Video lecture
Placement on Time Line / Page no.	36:00 - 37:00
<p>Boxing and Unboxing has not been explained with detail and so need more elaboration</p> <p>The conversion of a primitive type (for example int) to the corresponding wrapper class (Integer) is called boxing.</p> <p>And the conversion of Wrapper class (for example Integer) to the primitive type (int) is called Boxing.</p> <p>http://coderevisited.com/boxing-and-unboxing-in-java/</p>	

Lecture No.	3
Suggestion type	Adding New Slide

Artifact	Video lecture
Placement on Time Line / Page no.	44:00 - 45:00
<p>Parameter "null" passed to showMessageDialog() has not been properly explained so need explanation</p> <p>The general syntax of showMessageDialog() is given below:</p> <pre>showMessageDialog(frame, message, title, type)</pre> <p>Where:</p> <p>"frame" is a frame object to be used as the parent frame.</p> <p>As we are not referenced showMessageDialog() to frame therefore we use null as a first parameter in showMessageDialog().</p> <p>Furthermore,</p> <p>"message" is the message string to be display on the dialog box.</p> <p>"title" is the title string to be used as the dialog box title.</p> <p>"type" is an integer code representing a specific message dialog box type. Valid type codes are predefined as constants in the JOptionPane class: INFORMATION_MESSAGE, WARNING_MESSAGE, ERROR_MESSAGE and PLAIN_MESSAGE.</p>	

Lecture No.	4
Suggestion type	Adding Popup Window
Artifact	Video lecture
Placement on Time Line / Page no.	21:41 - 22:16
<p>To increase the quality popup window must be added here at the given time line.</p> <p>The following must be written on the popup window:</p> <p>In JAVA primitive variables are passed by value and user defined data types or objects are</p>	

passed by reference.

Lecture No.	4
Suggestion type	Adding Popup Window
Artifact	Video lecture
Placement on Time Line / Page no.	25:02-25:29
A coding example must be included as: Student s; // Student class object created in C++ Student s= new Student(); // Student class object created in JAVA	

Lecture No.	4
Suggestion type	Adding Popup Window
Artifact	Video lecture
Placement on Time Line / Page no.	27:17 - 27:32
A coding example must be included: In C++: To access reference object, arrow operator (->) has been used. Student *s=new Student(); s->getName(); In JAVA: Arrow operator (->) is not available so only dot operator (.) is used to access setter/getters functions, such as: Student *s= new Student();	

```
s.getName();
```

Lecture No.	4
Suggestion type	Adding New Slide
Artifact	Video lecture
Placement on Time Line / Page no.	37:30 - 40:00

The following slide added on the given time line:

- A class can have *static*
 - Variables
 - Methods
- Static variables and methods
 - Are associated with the class itself!!
 - Not associated with the object
- Therefore Statics can be accessed without instantiating an object!
- Generally accessed by class name
- Cannot refer to a non-static instance variable in a static method
 - No this reference
- Occurs as a single copy in the class
- For example;
 - System.out is a static variable
 - JOptionPane.showInputDialog(String)

Lecture No.	4
Suggestion type	Updating slide
Artifact	Video lecture
Placement on Time Line / Page no.	35:55 - 36:08

Artifact	Video lecture
Placement on Time Line / Page no.	06:54 to 07:34

Generic ArrayList:

ArrayList has been modified in Java5 to support Generics which makes Java ArrayList even more powerful because of enhanced type-safety. Before Java5 since there was no generics no type checking at compile time which means there is chance of storing different type of element in an ArrayList which is meant for something and ultimately results in ClassCastException during runtime. with generics you can create Java ArrayList which accepts only type of object specified during creation time and results in compilation error if someone tries to insert any other object into ArrayList in Java; for example if you create an ArrayList of String object you cannot store Integer on it because add() method of ArrayList will check Type before adding object into ArrayList in Java opposite to add() method of Java4 which accepts any object.

Creating Generic ArrayList:

```
ArrayList <ObjectType> arrayListName= new ArrayList<ObjectType>();
```

Example:

```
ArrayList <PersonInfo> person= new ArrayList<PersonInfo>();
```

<http://javarevisited.blogspot.com/2011/05/example-of-arraylist-in-java-tutorial.html>

Placement on Time Line / Page no.	31:30 to 32:00

In the slide there is comparison between web application and web services.

there is a point that web services have “No UI” it should be replaced by

“May or May not have UI” or “generally have no UI”
