Topic Selection for Project

Dear students,

The students enrolled in MIS620 are required to select a topic for Project. You can select a topic for project through following ways and submit SRS with in the due date. The project can be of following categories.

1. Design a New System (in this case a new system has to be analyzed, designed & developed)

2. Review Existing System (in this case you have to re-analyze, re-design and re-develop an existing system without copying anything)

Furthermore, to reduce the chances of plagiarism a list of topics on which work has already been done by the students is being provided. If you select a topic from this list you will have to make sure that your project is not copied. It has been clearly mentioned that any **copied work** will be strictly dealt with and marked as '**Zero**'. Moreover it can also lead to cancellation of your degree. Links of the list of already submitted projects, Schedule, and Templates for all deliverables are uploaded on VULMS:
